Position

Junior Data Engineer for Palanti Foundry (m/w/d)

Aufgabe und Verantwortungen

The customer is running a global project for the next two years to implement a new big data platform (Palantir Foundry). The Data Engineer has the following tasks.

- Hands on supporting the data transformation through data injection using data pipelines (60 - 70 %).
- Maintenance and support of existing pipelines (30 - 40 %).

Qualifikation / Profil

- Knowledge of data engineering and data transformation.
- Experience with Palantir Foundry, if possible.
- Experience with Python, if possible.
- Ability to work in a team.
- English would be an advantage.
