Position

IT Business Relationship Manager (m/w/d)

Task and responsibilities

Reporting to the Group IT Business Relationship Management (BRM) and PMO Manager, the IT Business Relationship Manager will lead the IT Portfolio of an European company division to deliver flexible, scalable, and effective technology solutions that solve business problems and consistently deliver business value aligned with the business strategy.

The IT Business Relationship Manager will work closely with the IT Business Partners for the relevant areas and is responsible for ensuring the portfolio of divisions' IT projects is effectively managed, prioritised, approved and delivered in line with the expectations of all senior stakeholders. This is achieved through

- the facilitation of dedicated IT Steering Committees
- resourcing of prioritised projects from the Group BRM Team (e.g. the assignment of Business Analysis and Project Management skillset)
- overseeing the effective delivery of approved Group IT projects aligned with the SOx IT Project Management Methodology
- supporting the yearly budgeting process for all Group IT projects
- working with the Application Services & wider IT management to provide input into the strategy and continuous improvement of the IT services provided to the Group business units.

In addition to the BRM responsibilities, the candidate in this role will also be responsible for providing their own Business Analysis and Project Management expertise to business-critical projects within the Group IT portfolio. Assignment to these projects will be agreed with IT Management as required.

Key Responsibilities:

- Demand Management & IT Steering Facilitation
- Partner with the Group Business areas and IT Business Partners to develop IT delivery roadmaps aligned with Business & IT strategy
- Resourcing of Group IT roadmaps to support successful delivery of projects and management of project scope.

- Support the IT Financial Controller and IT Senior Management teams in the yearly budgeting process, and ongoing maintenance of budget oversight.
- Work with Business and IT teams to develop innovative solutions that automate and scale business processes.
- Contribute / Lead post project implementation reviews and communicate the lessons learned with a view to continuously improving project delivery and business analysis standards within Ardagh.

Qualifikation / Profil

- Degree in computer science, business or engineering.
- Professional certification is one or more of the following disciplines: Project Management; Business Analysis; Project Portfolio Management.
- 5+ years of proven project delivery, including large transformation projects leading cross-functional, geographically dispersed teams.
- Experience chairing and facilitating project/portfolio Steering committees attended by senior Exec level.
- Financial analysis skills – ability to work with the Business to produce Business Justifications that drive real financial business value to the organisation.
- Expert knowledge of business areas with detailed process knowledge and expertise.
- Detailed knowledge of key IT systems and capabilities, (e.g. SAP), that support the end-to-end processing of functions across the business.
- Ability to deal with ambiguity and thrive in a rapidly changing business environment.
- Excellent interpersonal and communication skills; strong analytical skills; a proactive, problem-solving and delivery-focused approach to their day-to-day roles and responsibilities.
- Ability to set the direction and strategy for a small – medium sized team. .
